Guadalupe Franco

Full-Stack Software Engineer

Querétaro, México | +52 442 351 0534 | franco.rguadalupe@gmail.com

guada-franco.pages.dev | linkedin.com/in/guadalupe-franco | github.com/gdpe-franco

Software Engineer with about 4 years of experience building full-stack applications, APIs, and system integrations. Experienced in PHP (Laravel, Symfony), Python, and JavaScript/TypeScript, with a focus on technical design and delivering solutions from implementation through production support. Cares about clear, reliable code.

Skills

Backend	PHP (Laravel, Symfony), Node.js (NestJS), Python (FastAPI, Pydantic), Go
APIs & Integration	REST, SOAP, SAML 2.0, JWT, RBAC, MCP
Frontend	JavaScript, TypeScript, React, Vue.js (Nuxt)
Data & Infrastructure	PostgreSQL, MySQL, Redis, Docker, AWS (S3, SQS, EC2), CI/CD
Dev Tools	Git, GitHub Actions, Jenkins, PHPUnit, pytest, Playwright, Swagger, Sentry, New Relic
AI & Agents	LangGraph, Azure OpenAI, OpenCode, Codex, Claude Code
Languages	Spanish (Native), English (C1), Portuguese (A1)

Experience

Software Engineer

Sep. 2025 – Jul. 2026

MedTrainer | Querétaro, México | Remote

- Developed Symfony features for a SaaS platform serving 8,000+ organizations, covering technical design, implementation, testing, deployment, and production support.
- Authored technical design proposals and presented them for peer review, contributing to architecture discussions before implementation.
- Extended the existing course-recommendation chatbot with a separate MCP flow for internal API questions, alongside its RAG/vector-store flow. Observed responses took about 45 seconds for recommendations and 32 seconds for MCP queries; these were different question types.
- Reviewed code and adopted AI tooling for research, prototyping, and routine engineering tasks.

Full-Stack Developer

Aug. 2023 – Sep. 2025

Mienvío | Monterrey, México | Remote

- Migrated a Laravel monolith from 5.2 to 6.x through incremental upgrades, addressing compatibility issues and undocumented defects for a logistics platform serving 1,000+ active merchants.
- Redesigned the public shipment and label API, reducing the workflow from five endpoints to three; integrated API v2 with the React frontend and supported a staged rollout using GrowthBook.
- Implemented SAML 2.0 single sign-on with Auth0 for enterprise customers.
- Maintained and refactored carrier and marketplace integrations, including Shopify, WooCommerce, FedEx, UPS, and Estafeta, across Laravel and Go/Python microservices.
- Conducted code reviews, onboarded new engineers, and collaborated with cross-functional teams to deliver customer-focused solutions.

Web Developer Intern

2022 – 2023

Universidad Politécnica de Querétaro | Querétaro, México | On-site

- Contributed to system analysis through UML diagrams, designed interfaces in Figma, and implemented PrimeVue views and Laravel APIs.

Projects

AI Multi-Agent Coding Platform

- Built a Vue/FastAPI application that generates web applications through LangGraph planning, coding, and review agents using Azure OpenAI.
- Designed asynchronous execution with a PostgreSQL-backed worker, maintaining project context, execution history, and bounded correction loops.

Book Management System

- Built a Laravel/Vue dashboard with role-based access and a Node.js audit service using Redis Streams, duplicate-safe event processing, and Socket.IO notifications.

Education

B.Sc. in Computer Systems Engineering

2020 – 2023

Universidad Politécnica de Querétaro | Querétaro, México

Technical High School Diploma in Programming

2017 – 2020

CBTis 118 | Querétaro, México
